Professional Summary

Pre-Final Year Electronics and Communication Engineering student with a strong academic record (CGPA: 9.02/10) and practical experience in Embedded Systems, PCB Design, Internet of Things (IoT), Artificial Intelligence, and Full-Stack Web Development. Passionate about developing intelligent hardware-software solutions through real-world engineering projects and internships. Quick learner with strong analytical, problem-solving, and teamwork skills, seeking opportunities to contribute to innovative engineering and software development projects.

Education

B.E – Electronics and Communication Engineering	Expected Graduation: July 2028
K.S. Rangasamy College of Technology (Autonomous), Tiruchengode	CGPA: 9.02/ 10 (Up to IV Semester)

Technical Skills

- Languages:** Python, C, HTML5, CSS3, JavaScript
- Frontend:** HTML5, CSS3, JavaScript
- Backend:** FastAPI, REST APIs
- Databases:** SQLite
- Embedded Systems:** Arduino, ESP32, ESP8266, IoT, Sensor Interfacing
- PCB Design:** KiCad, PCB Layout, PCB Footprint Design
- AI & OCR:** Gemini AI API, EasyOCR, OCR Integration
- Software & Tools:** MATLAB, Multisim, TINA, Git, GitHub, VS Code

Internship Experience

- PCB Design Intern | SSD TraceTech PCB Pvt. Ltd.
- Embedded IoT Intern | Emertxe Information Technologies
- Embedded System Developer (Virtual) | EduSkills | AICTE | Microchip

Projects

Aarogya AI – Intelligent Medical Report Analyzer

- Technologies:** Python | FastAPI | HTML | CSS | JavaScript | SQLite | EasyOCR | Gemini AI
- Developed an AI-powered healthcare web application capable of analyzing medical reports.
 - Integrated OCR to extract medical information from PDF and image reports.
 - Generated AI-based patient-friendly summaries, health scores, risk levels, and medical recommendations.
 - Designed a secure dashboard with authentication, AI chatbot, and multilingual support architecture.

RFID-Based Smart Attendance System

Technologies: ESP8266 | MFRC522 RFID | IoT

- Designed and developed an IoT-enabled RFID attendance monitoring system.
- Automated attendance recording through wireless communication.
- Improved attendance accuracy while reducing manual effort.

Deepfake Text Detection System

Technologies: Python

- Developed a machine learning-based text classification model for detecting AI-generated content.
- Explored Natural Language Processing concepts for intelligent text analysis.

Cyber Shield – AI-Powered Financial Fraud Detection System

Technologies: Python | Machine Learning | AI | Chatbot

- Developed an AI-powered financial fraud detection platform.
- Implemented phishing detection and AI-powered real-time victim assistance.
- Awarded 1st Place at AWS Innovation Fest (KALEIDO 2026).

PCB Design Projects

Software: KiCad

Projects:

- Mobile Phone Charger PCB
- DC Motor Speed Controller PCB

Certifications

- Oracle Certified Foundations Associate – Agentic AI Certified Foundations Associate – Oracle
- Introduction to Industry 4.0 & Industrial Internet of Things – NPTEL
- Cloud Computing – NPTEL
- Digital Application Fundamentals – STEM (Silver) – FutureSkills Prime (NASSCOM)
- MongoDB University – AI Data Strategy, Vector Search Fundamentals, Retrieval-Augmented Generation (RAG), AI Agents
- MATLAB Onramp – MathWorks
- C Programming 101 – Infosys Springboard

Position of Responsibility

- **Secretary** – CAFACE (ECE Students' Association)
- Coordinated departmental technical events and student activities.

Achievements

- **Smart India Hackathon (SIH) 2026** – Team shortlisted at the college level and project selected for further presentation at the next stage.
- **1st Place – AWS Innovation Fest (KALEIDO 2026)** Awarded for "Cyber Shield", an AI-powered financial fraud detection and victim support system at SIMATS Engineering.
